

Immediate start of a diamond drilling program on the O'Brien/Kewagama site

Rouyn-Noranda, February 28, 2005, Radisson Mining Resources Inc. (TSX Venture Exchange: RDS) is pleased to announce the start of a diamond drilling exploration program on its O'Brien and Kewagama properties located in Cadillac Township in the Abitibi region.

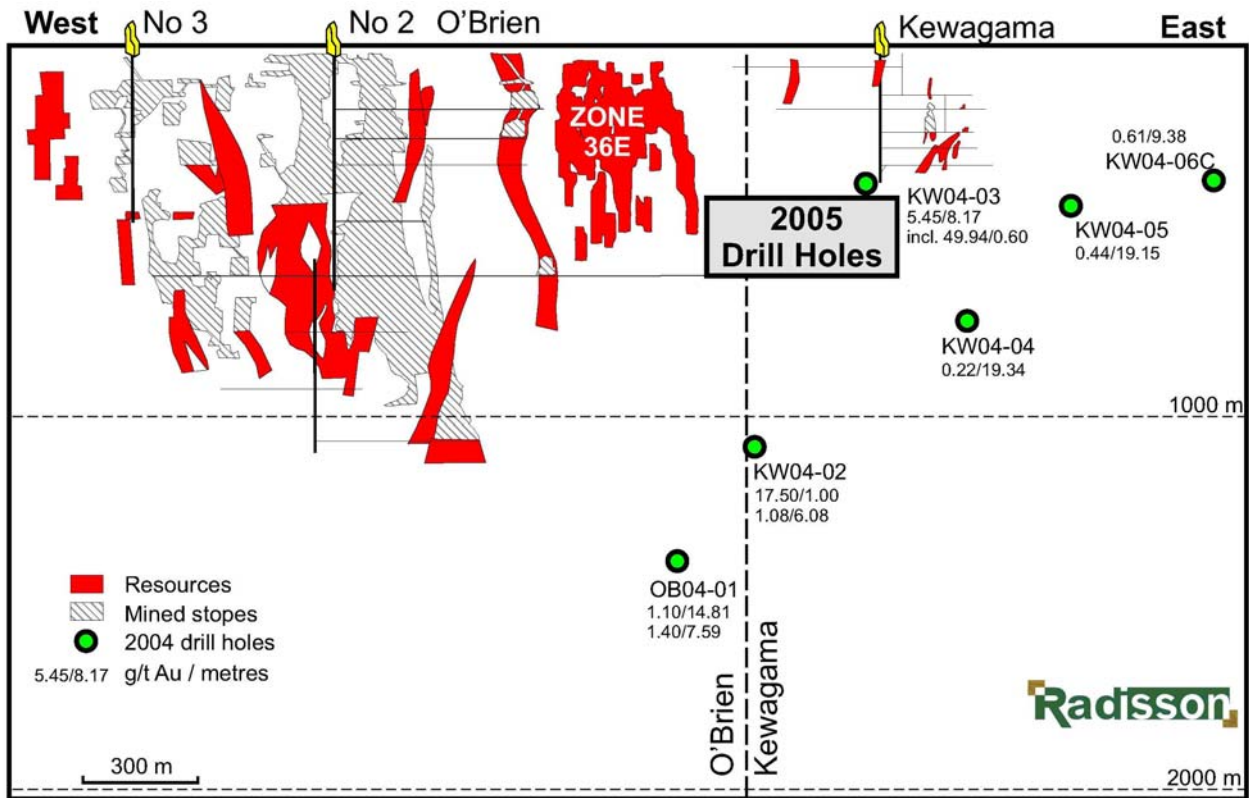

The 2005 program will verify the zone located between zone 36 E and the Kewagama hole (drillhole KW04-03: 5.45 g/t Au / 8.17 m), between 1500 feet (460 m) and 2000 feet of depth (600 m) with the main objective of defining a sufficient resource to warrant an underground bulk sample.

Highlights of the 2004 drilling program

The results of the 2004 program on the property have confirmed that the O'Brien Mine structures extend beyond the previously mined veins. The gold-bearing horizon is now known over more than 3 kilometres on the O'Brien/Kewagama site, thus allowing a significant increase in the potential for new resource discovery in the project.

2005 TARGET AREA

Radisson is a Québec-based mining exploration company. It is the sole owner or has interests in nine gold-bearing properties, with some containing base metals. The properties are located in northwestern Québec.

Its main asset is the O'Brien/Kewagama project in Cadillac, where close to 600,000 ounces of gold were produced between 1926 and 1956 (1.3 M tons at 0.467 oz. of gold/ton). On this property, Radisson has defined total resources of 312,000 ounces (Charlton 1995 and Roscoe Postle 1997).

The Company also has a gold mill rated at 200 tons per day on this same property.
