#### **ABOUT RADISSON MINING:**

Radisson is a Quebec-based exploration company with an interest in seven properties in northwestern Quebec and one property in northwestern Ontario. The main asset of Radisson, the O'Brien /Kewagama Property (the Property) is located along the Cadillac Break and was previously the site of the past producing O'Brien mine, the highest grade gold producer of the Abitibi greenstone belt (reported production 1,302,000 tons @ 0.448 ounces per ton, 1932-1955).

Exploration by the Company on the Property in the past resulted in the discovery of an indicated resource of 218,540 ounces (based on an indicated resource of 270,000 tons at an uncut grade of 0.56 oz/ton and an inferred resource of 182,000 tons at an uncut grade of 0.37 ounces) as defined in the Scott-Wilson RPA 43-101 report of May 2007.

These resources, all outlined above the 2,000 foot level and located some 2,500 feet east of the old O'Brien mine workings, are high grade structures similar in nature to the O'Brien gold mine.

Management believes that in addition to the above structures and the excellent depth potential in this area, (the Agnico Eagle LAPA gold mine to the east along the Cadillac Break is located at 4,000 feet, with the Agnico Eagle Laronde mine, located 4 km to the northwest having now surpassed 10,000 feet in depth), there exists potential on the Property for high tonnage, lower grade deposits of the porphyry types, similar in nature to the Cadillac Break porphyries of the Osisko and Goldex types.
